No. $\frac{F.\ I.}{35}$ of 1894.

From

The COLLECTOR of LAND REVENUE,
CUSTOMS and OPIUM,
Bombay;

To

The CHIEF SECRETARY to GOVERNMENT,
General Department, Bombay.

Bombay Collector's Office,
9th June 1894.

Sir,

I have the honour to submit the Provincial Report on the working of the Indian Factories Act for 1893.

I also forward the Annual Report of the Chief Inspector of Factories, Bombay.

I have the honour to be,
Sir,
Your most obedient Servant,

J. M. CAMPBELL,
Collector of Land Revenue, Customs and Opium.

LIBRARY OF THE BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY

PROVINCIAL REPORT ON THE WORKING OF THE INDIAN FACTORIES ACT IN THE BOMBAY PRESIDENCY FOR THE YEAR 1893.

The accompanying Provincial Form No. II shows that there are in the Bombay Presidency 267 factories against 253 reported last year. Of these 119 are situated in the Town and Island of Bombay. Of the total of 22 factories in the Northern Division 15 are at Ahmedabad, and of 97 in the Central Division 73 are in the Khándesh District. There are only 8 factories in the Southern Division, and out of the 21 factories in Sind 16 are at Hyderabad.

2. Of the 267 factories, 159 work all the year round, the remaining 108 being seasonal. These latter are cotton ginning factories and presses outside Bombay.

3. The cotton industry continues to occupy the chief place and now employs 98,958 hands in 209 factories. The total number of persons employed in factories of all descriptions is 126,145, of whom 87,984 are at work in Bombay.

4. Throughout the year under report the office of Presidency Inspector remained vacant. In Bombay Mr. Jackson, C. S., the Chief Inspector, performed alone all the necessary quarterly inspections. The District Magistrates and Assistant Collectors jointly carried out the inspections in the other portions of the Presidency.

5. Of the total 267 factories 168 were inspected more than 3 times during the year, 35 three times, 31 twice and 32 once. Six factories were not inspected at all. These were 2 in Sholápur, 1 in Ahmednagar, and 3 in Hyderabad. In the case of Sholápur the factories were working at such irregular intervals that an inspection was not practicable. The failure to inspect the other factories is not explained by the Collectors submitting the reports.

6. The appointment of Joint Inspectors was made some months after the close of the year and the rules for their guidance have only recently been published.

7. The provisions of the Act regarding the weekly holiday and midday rest seem to be generally observed. At one factory in Násik, however, Messrs. Almond & Company's Cotton Ginning Factory at Chandápuri, the practice is to give a half holiday every Friday, and to close the mill for 2 days once a fortnight for the purpose of boiler cleaning. It is very doubtful whether this arrangement satisfies the requirements of the law, but the matter is occupying the attention of the District Magistrate. Sunday continues to be the most popular day for the weekly closing, but is not kept as a holiday if an important native holiday falls on a week day. No additional factories have been exempted from the rule as to Sunday work during the year under report.

II.—Sanitary condition.

8. The general sanitary condition continues satisfactory, very few orders having been found necessary on this subject during the year. In nearly all cases the buildings are said to be clean and well kept.

9. Latrines continue to form the chief point for notice in this connection. In many up-country factories the operatives are accustomed to resort to the fields, so that even where latrines have been provided at the District Magistrate's orders they remain unused. It would appear that the rule on the point can only be enforced in a useful manner in the case of factories situated in towns or large villages.

No steps have so far been taken to improve the dust-laden atmosphere of the Bombay cotton presses which were described by Mr. Jackson as the least satisfactory of the Bombay works.

10. The question of ventilation is still under discussion. In Bombay the Chief Inspector is laying certain definite proposals before the Mill-owner's

Association which, it is hoped, may lead to a great improvement in this respect without imposing a burdensome expense on the mill-owners. The main difficulty is the provision of lateral openings averaging per head the legal minimum. The recent appointment of Joint Inspectors will no doubt materially assist the Chief Inspector in coming to a decision on the point. So far no orders have been issued, and the question is one which requires great care and consideration. The mill-owners are generally prompt in adopting suggestions made to them. It is, therefore, the more necessary to be certain that any demands made on them in this respect are fair and reasonable before ordering expensive alterations to be undertaken.

As a rule the area and cubic space available leaves no cause for complaint. This is especially true of the newer mills.

III.—General Health of Operatives.

11. The general health of the mill-hands continues satisfactory. There are no signs that the work has any ill-effect on them. The following remark made by the Collector of Khándesh seems to cover the case of all up-country factories :—

"There is really no reason to suppose that the health of people working in factories differs from that of their brethren who are working elsewhere. Working in a factory has no bad effect on the people's health. It has not got the chance. If people devoted their lives to factory work and worked in factories every year and all the year long, possibly some effect on their health might be noticeable. But they simply dip in and out again."

12. It was pointed out last year that in most cases the factory hands are constantly changing, the workmen passing from agricultural labour to mill-work and back again as often and whenever they pleased. In this respect there is a broad distinction between the factory hand of this country and his brother worker in the great English manufactories. The constant change in occupation provides a safeguard against the possible ill-effects of labour in a crowded and not always well ventilated building. It is, therefore, satisfactory to notice that there is at present no tendency noticeable towards more continuous and permanent engagements.

13. The percentage of absenteeism varies very widely. It is pretty generally agreed that absence is not due to any effect of working in a factory. Weddings and other private business are the main reason of non-attendance.

14. The total number of factory hands dealt with in this report is 126,145, of whom 25,539 are women, and 5,753 children. Of this total 89,093 are employed in cotton spinning and weaving, 9,080 in cotton pressing and cleaning, 1,509 in other textile industries (wool, hosiery and silk), 12,952 in railway workshops, 2,598 in iron works, 2,604 in printing presses, and the remainder in various minor industries. These figures show no material alteration in the proportionate numbers reported for the various industries last year. It may, however, be noted that, while the total population has increased by nearly 8,000, the number of children employed is less by 200. The Chief Inspector suggests from the figures for Bombay that the restrictions now placed on the employment of children is leading to the substitution of adult for child labour. The figures for the whole Presidency would seem to lend support to this view.

The proportion of female hands employed has slightly increased.

IV.—Wages and General Condition.

15. In the Bombay cotton mills the rate of wages remains, as reported last year, *viz.*, full-time male operatives earn from Rs. 7 (carding-room) to Rs. 20 (spinner); women earn from Rs. 7 to Rs. 8 (reelers and winders), and children Rs. 6 to Rs. 7 (doffers and piecers). A small rise is to be noticed in the earnings of weavers, owing to the increase in the number of looms. Wages are generally paid by the piece.

For the provincial factories the particulars reported by the Collectors are very vague and do not appear reliable. In many cases no estimate is given at all of the earnings of the various hands. The Collectors of Khándesh and Dhárwár report that men earn as a rule 5 annas a day and women 3. Children are

reckoned at 2 or 2½ annas. A similar scale is reported for the cotton industry at Násik. This is slightly above the ordinary wages of the field labourer in these localities. On the whole it may be said that where information is forthcoming, the rates quoted show no change since last year's report.

16. In Surat the family earnings are said to vary from Rs. 5 to Rs. 30. In Thána Rs. 20 to Rs. 40 is given, and for Khándesh about Rs. 20. In most other cases no attempt has been made to frame an estimate. The figure for Bombay may be taken as Rs. 25 or Rs. 26.

17. Indebtedness does not seem to be imposed on the factory hands on account of their work in the factory. As was reported last year the hands are commonly in debt on account of expenditure incurred on weddings and other private embarrassments. It is not reported whether the system of keeping wages in arrears in Bombay has been amended.

18. The cost of living has not varied and may be taken as reported last year to be from Rs. 3 to Rs. 5 in Gujarát, Rs. 5 in Thána and Rs. 4 in Bijápur and Dhárwár.

V.—Employment of Women and Children.

19. Of the total 25,539 women employed, 24,836 were employed in the cotton industry and the rest distributed in small numbers in other occupations. In the cotton factories they are confined to the reeling and winding departments.

20. In nearly all cases the hours of work are 10 or 11 for women and 6½ or 7 for children. At one mill in Surat the children work 5½ hours only, but this is exceptional. In Khándesh Mr. Seddon, the Assistant Collector, reports that "the usual thing is for women to work from 6 A.M. to 6 P.M., with half an hour's interval in the middle of the day," and adds that he has taken no steps as half an hour's interval in the middle of the day is plenty. The hours, however, are objectionable as they are illegal. No doubt, as the Chief Inspector remarks with reference to Bombay, it is one thing to provide for a cessation of work for 1½ hours in the middle of the day, and another to enforce it. The difficulty is increased when the persons chiefly interested, *i.e.* the women themselves, are averse to availing themselves of the full interval. It seems that half an hour's rest with lighter hours would be more popular, especially in Bombay, than the enforced interval of idleness in the middle of the day, when it is not required.

21. Out of 5,753 children 4,433 are boys and 1,320 girls. The majority are to be found in the cotton mills. As already pointed out, their number has decreased during the year under report.

22. The usual hours vary from 6½ to 7 as stated in a preceding paragraph. The details have not varied from those supplied in paragraph 26 of last year's report.

23. A question has arisen during the year concerning the form of certifiactes required under the Act, and has been discussed by the Chief Inspector. The present practice in Bombay is for the certifying Surgeon to initial the entry of the boy's name and age in the register kept by the Mill Manager on the premises. It is feared that if a new system of individual certificates is introduced openings for fraud will arise which will render the Inspector's test more difficult and probably necessitate the re-examination of the child by the Civil Surgeon in all doubtful cases. The correspondence is now before Government.

VI.—Fencing Machinery.

24. In nearly all cases the machinery is now adequately protected. Orders issued on this point are said to be promptly complied with. The guards when once provided are kept in use. No prosecutions were found necessary for failure to carry out orders in this point.

VII.—Accidents.

25. There were 932 accidents or an increase of 201 on last year. Of these 13 were fatal and 75 serious. It will be seen that the increase is confined

entirely to minor accidents and probably indicates greater care in reporting. As the total number of hands employed has increased by several thousand, the proportion of fatal and serious accidents shows an improvement.

26. With reference to the correspondence on the subject of accidents caused while replacing belts (*vide* paragraph 30 of last year's report) it is satisfactory to note that no serious accidents have occurred in this manner during the year under report.

VIII.—Prosecutions.

27. Two prosecutions were instituted during the year. At Broach the Manager of the Mofussil Manufacturing Company was convicted and fined for employing a child for more than 7 hours. The conviction was reversed on appeal.

In Poona the Manager of the Metal Factory was fined Rs. 10 for allowing the latrines attached to the building to be in a filthy state. A warning first issued to him was disregarded.

28. It is desirable to refer to a remark made by the Collector of Ahmednagar who draws attention to the fact that the managers of factories are not bound to report fires occurring on their premises unless they cause death or bodily injury. The Collector is of opinion that all fires should be reported as they are accompanied by danger to human life, and suggests that in event of the Act being amended notices similar to those under Section 13 should be made obligatory in case of all fires occurring in factories.

Effect might easily be given to this recommendation by the drafting of a short rule under Section 18 (*g*), but it may be pointed out that in addition to the submission of notices, provision would have to be made by an amendment in the Act to empower the Collector or other controlling authority to call upon the Manager to take precautions against the recurrence of fires and to guard against danger to human life in event of their occurrence. Otherwise the notice would be useless.

29. The chief point for settlement during the coming season will be to work out some practical solution of the ventilation difficulty. In this matter valuable assistance may with confidence be looked for from the Joint Inspectors. With their help I am hopeful that Mr. Enthoven will succeed in framing rules which will secure to the workers the benefit of fresh air without unduly interfering with the necessary conditions of factory management.

J. M. CAMPBELL,
Collector of Land Revenue, Customs and Opium.

9th June 1894.

tions given on the forms of those statements should, so far as applicable, be followed in the preparation of this statement. If the systems of working referred to in Columns 34 to statistics specially furnished by District Officers in respect of Districts and by the Chief Inspector or other officer designated by the Local Government in respect of the Presi-

2 to 14 of which any considerable number are worked in any Province. Any class of Factories of which there are ten or more in a Province should be separately shown.

J. M. CAMPBELL,
Collector of Land Revenue, Customs and Opium.

No. $\frac{F. 1}{34}$ of 1894.

From

THE CHIEF INSPECTOR OF FACTORIES,
Bombay;

To

THE COLLECTOR OF LAND REVENUE,
CUSTOMS AND OPIUM,
Bombay.

Bombay Custom House,
8th June 1894.

SIR,

I have the honour to submit the following report on the working of the Factory Act in the Town and Island of Bombay during the calendar year 1893.

2. The number of factories liable to inspection at the time of the submission of last year's report was 119. Of these, five have been closed during the year and two others closed temporarily. On the other hand, five new factories have been brought on the list which thus continues to include 119 factories liable to inspection.

3. During the year under report the whole of the inspection work was performed by the Chief Inspector Mr. A. M. T. Jackson, C.S. No other inspector was appointed.

4. Of the total of 119 factories on the Inspector's list at the beginning of the year, 114 remained open throughout the year, and were inspected once a quarter. Of the five factories closed and the five brought on the list during the year three were inspected thrice, three were inspected twice, and four once only. The following statement shows the number of factories inspected during each quarter:—

January 1st to March 31st	119
April 1st to June 30th	118
July 1st to September 30th	119
October 1st to December 31st	119

5. No Joint Inspectors were appointed during the year under report as the rules for their guidance were only published some months after the close of the year.

6. The proportion of factories devoted to the cotton industry remains very much as described by Mr. Jackson in paragraph 7 of his last year's report. There are now 65 cotton mills on the list. Of these 29 are both spinning and weaving mills. These are all year-round factories.

7. The factory population has increased from 84,661 to 87,984, excluding temporary hands in the case of cotton presses and a few minor factories. Probably close on 90,000 persons may be said to be the maximum number employed in all the Bombay factories in any one day.

8. The weekly holiday prescribed by law continues to be granted regularly. Equal attention is paid to the provisions of the law regarding midday stoppages, though, as has been previously pointed out, it is one thing to insist that a stoppage shall be given and another to provide for the cessation lasting for the full time specified.

9. No additional factories have been exempted under Section 5 B of the Factory Act during the year to which his report refers.

II.—Sanitary condition.

10. Mr. Jackson has dealt in some detail with the sanitary condition of the Bombay factories in the last annual report. From a note left by that officer at the time of his departure on leave I gather that there is nothing to be added to his previous remarks on the subject. No improvements worthy of record would, therefore, appear to have been carried out during the 12 months that have elapsed in the interval.

11. The question of ventilation is still a vexed one. Floor space and cubic space as a rule exists in plenty. But the window space is everywhere deficient when compared with the prescribed standard, and the windows again are nearly always kept closed. For those who are not experts it is difficult to determine what steps can reasonably be demanded from the mill-owners to bring the factories more in conformity with the provisions of the Act. To exact the full 10-foot opening in the absence of proof that this is a necessary minimum, would be to inflict a great hardship on the factory owners who are generally willing to meet reasonable demands and therefore the more deserving of considerate treatment. Mr. Shore, who has inspected most of the factories, has a scheme for ventilation by openings in the walls to be made below and above the factory windows, openings which cannot be closed and which are designed respectively to admit fresh air and allow the exit of the exhausted atmosphere. The matter is one which must be considered still in an unsettled stage. The recent appointment of Joint Inspectors will no doubt do much to make clear what alterations in the present arrangements are absolutely necessary. Meanwhile a correspondence on the subject is in progress with the Mill-owners' Association. It is to be hoped that by the date of the submission of next year's report it will have been found possible to provide for the requirements of the operatives without exacting from the mill-owners an amount of trouble and expenditure which they find unreasonable.

III.—General Health of the Operatives.

12. Mr. Jackson having left no notes on this point it is to be inferred that the general health of the operatives during the year under report has not varied in any marked manner from the standard described at the time of submitting the previous report. Mr. Shore favours me with an opinion to this effect, but adds that he is not satisfied with the appearance of children whose age is near the lower limit of nine years.

IV.—Wages and general condition.

13. Under this head I have been supplied by Mr. Shore with the following particulars :—

Wages of operatives.

	Rs.
1. Jobbers (fixed pay)	70 to 80 per mensem.
2. Do. piece-work	30 to 35
3. Scutcher-room hand	8 to 10 „
4. Card-room hand	10 to 15 „
5. Frame-tenter's hand...	10 to 15
6. Ring-frame hand	9 to 10 „
7. Openers...	18 to 20
8. Add male hands	7 to 8
9. Weavers...	15 to 20
10. Helps	10 „
11. Reelers (women)	7 to 8
12. Winders (women)	7 to 8
13. Doffers (boys)	5 to 6 „
14. Piecers (boys)	7 to 8 „

Of these Nos. 2, 5, 7, 8, 9, 11, 12 are all piece-works. In the other cases the wages are fixed per mensem. A small rise has occurred in the wages of weavers, due apparently to an increase in the nnmber of looms. Otherwise the position of the mill-hands remains stationary. On the general condition of the operatives during the year under reference I have no information.

V.—Employment of Women and Children.

14. There are now 18,192 women employed in the Bombay factories, of whom 17,716 work in the cotton mills, almost all being reelers and winders. The increase is considerable on last year's numbers and tends to show that the limitation of the hours of women's work to 11 hours has not in any way prejudiced their chances of employment.

15. It has already been noted that the difficulty of assuring to them 1½ hours' rest in the middle of the day continues. The women always profess to

enjoy that interval, but there is a suspicion that they very seldom spend the whole time at rest. If, however, they are aware of their right to cease work, which they mostly are, and intentionally abstain from doing so, nothing but a resident army of Inspectors furnished with the most summary powers could prevent the infringement of the provision referred to. In 48 out of 65 cotton mills children were employed, the total number being 3,363 as against 3,609 of last year. From this it is to be inferred that the restrictions imposed on the employment of children under the Act is leading to their being displaced in favour of adult labour. But it would be rash to generalize from the results of one year's experience under the new law. Mr. Jackson has left on record a note on the subject of children's certificates. He refers briefly to a controversy with the Legal Remembrancer who drafted rules dealing with the form of such certificates and whose opinion that separate certificates are required by law, has necessarily been accepted. These certificates are both troublesome and annoying according to Mr. Jackson, who continues: "In most Bombay mills the doctor passes the children on the spot in the presence of the manager, without whose connivance no personation is possible. But when transferable certificates are given there is no such check on personation. When, therefore, an Inspector finds a child employed in mill B, under a certificate he has brought with him from mill A, where he was employed before, two courses are open to him, namely:—

(1) to enquire of the child's parents and the manager of Mill A, as to the child's identity with the one named in the certificate;

(2) to call for a fresh certificate, as he has power to do.

Personally I should have no hesitation in taking the latter course, which would be preferred by all parties to the delay and trouble involved in an enquiry into the boy's identity. This of course means in practice a return to the former system."

VI.—Fencing of Machinery.

16. [redacted] the progress made during the year in fencing the dangerous portions of machinery, I have no information left on the record, but it would seem from the Register of Factories inspected that a good number of suggestions have been made for additional protection, and that in almost all cases these suggestions were adopted, the necessary guards being added before the next quarterly inspection. From the number of factories entered as "in order" at the time of the last quarterly inspection it is to be inferred that very little now remains to be done in the matter of protecting machines. The guards appear, when once made, to be kept in use.

VII.—Accidents.

17. The number of accidents reported during the year was 677, of which five were fatal. This shows an increase of 75 over last year's figures, but the number of fatal accidents has not increased. One of these fatal accidents occurred at the Kaiser-i-Hind Mill on the 22nd February 1893. The deceased was reported to have fallen through the sky light over the rope-race into the Engine-room. Another occurred on the 13th March 1893 at the Jivráj Bállu Mill. In this case a man appears to have unscrewed through mistake the manhole cover of the boiler containing steam; he was so severely scalded that he died shortly afterwards. A circular was issued to the Agents of all the factories asking them to require their Engineers to state in writing what precautions were taken to prevent the occurrence of similar accidents. To this circular 88 boiler-owners replied that they had either put up notices in their boiler-houses prohibiting firemen and other workmen from working safety-valves and blow-off cocks or else had strictly warned them against any interference with the valves and cocks without the permission of the Engineers. The third fatal accident occurred on the 18th March 1893 at the Manockji Petit Mill. It was reported that the man who received the fatal injury was coming down the staircase when his foot slipped and he fell and fractured the base of the skull. The fourth fatal accident occurred on the 19th May 1893 at the Adamji Pirbhoy Tannery at Sion. The deceased was killed by his arm being drawn into a bark-breaking machine. His hand was caught by the feed roller and was drawn in and crushed, the limb being torn from the body. In this case the

mouth of the machine was required to be guarded by a gird to prevent a recurrence of similar accidents. The fifth fatal accident occurred at the National Spinning and Weaving Mill on the 18th October 1893. The deceased, a boy of 18 years, became entangled in the rollers of a ring spinning frame; his head, neck and shoulder were smashed in the machine.

Besides these five, 33 of the above 677 accidents were reported as serious, the commonest being the loss of one or more fingers.

These accidents are reported to be due not to the defective fencing but usually to carelessness on the part of the workmen who try to pull out refuse while the machines are working. Of the total of 677 persons injured, 607 were adult males, 8 adult females and 62 children between 9 and 14 years of age. Of the latter five were girls.

18. It has already been reported that the work of replacing belts on moving pulleys is the only branch of mill-work in which there is any special danger to life. The danger lies in the workman's clothing being caught between the pulley and the belt, so that he is whirled round and dashed to the ground from above. In paragraph 36 of last year's report certain suggestions were said to have been made to the Mill-owners' Association with a view to reducing the risk. It appears that the danger has been greatly decreased in consequence, as no serious accident has occurred in this branch of mill-work during the year under report.

VIII.—Prosecution.

19. There were no prosecutions during the year under report.

20. In conclusion I have to regret the meagreness of this report. I have, as you are aware, only recently received charge of this office, and I am therefore unable to write from experience on any of the points referred to above. I have also abstained from any detail comments for the same reason. I have given the necessary particulars in the shape of statistics with [illegible]on's notes where he has left any. To enlarge further on matters of which I [illegible]at present but little personal knowledge, would not, I believe, afford results of any value.

I have the honour to be,
Sir,
Your most obedient Servant,
R. E. ENTHOVEN,
Chief Inspector of Factories.
